

- Whether the instructions explain the proper modeling steps
 - **The instructions explain the steps well enough. The fact that I was able to understand what to do with no prior knowledge shows a lot.**
- Whether the measurements are explained well
 - **The measurements are explained well enough. However, some of the shapes' names are names that I've never heard of before, such as 'truncated right cone.'**
- If the instructions were clear enough for you to model the chess set in one go. If not, how many tries did it take.
 - **I reset the program about 4 times because I messed up on some of the commands. I'm not entirely sure if it was my fault or if it was the direction's fault.**
- Where did you get stuck in the steps?
 - **When opening a database for the pawn, the directions say to type '\$opendb pawn.g,' and I was stuck on this step for a while because the \$ in the beginning shouldn't be typed.**
- Which command did you find hard to understand and needs more explanation?
 - **The command that I found the hardest was probably something about the raytracing.**
